Report ID: recording_1766400147632

Patient Name: Aisha Bakr Al-Dalain

Age: 21

Sex: female

Exam Type: N/A

Date: N/A

Clinical History

Patient Profile: Aisha Bakr Al-Dalain, 21-year-old female, student, unmarried. Chief Complaint (CC): No current complaints, here for thyroid level check and medication adjustment. History of Present Illness (HPI): Diagnosed with hypothyroidism for 2 years, taking Thyroxine 50 mcg daily at 3 AM. Systemic Enquiry / Review of Systems (ROS): No current symptoms reported. Past Medical and Surgical History: Hypothyroidism for 2 years, no surgeries. Drug History: Thyroxine 50 mcg daily, Vitamin D deficiency treated with 50,000 IU monthly, no drug allergies. Family History: Family history of hypothyroidism. Social History: Non-smoker, student, no alcohol or drug use. Functional/Physiotherapy Relevance: N/A.

Detailed Findings

- Hypothyroidism — Patient has been diagnosed with hypothyroidism for 2 years, managed with Thyroxine.
- Thyroxine 50 mcg daily — Patient is on a stable dose of Thyroxine for hypothyroidism management.
- Vitamin D deficiency — Patient is being treated for Vitamin D deficiency with 50,000 IU monthly.
- Family history of hypothyroidism — Family history suggests a genetic predisposition to thyroid disorders.

Impression Summary

The patient presents for routine evaluation of hypothyroidism, currently managed with Thyroxine. No acute symptoms reported. Family history of hypothyroidism noted. Vitamin D deficiency is being addressed. The overall picture suggests stable management of hypothyroidism with no immediate concerns.

Recommendations

- Conduct thyroid function tests to assess current thyroid hormone levels.
- Evaluate the need for any adjustment in Thyroxine dosage based on test results.
- Continue Vitamin D supplementation as prescribed.

Urgency Level: low
