Report ID: N/A
Date Reported: N/A

Patient Name:	N/A	Referring Dr.:	N/A
Age:	N/A	Modality:	N/A
Sex:	N/A	Exam:	N/A
DOB:	N/A	Source File:	N/A

Clinical History:

Patient presents with ongoing joint pain in hands and feet for several months, worsening over time. Reports morning stiffness lasting more than 30 minutes and pain that improves with movement.

Findings:

- **Joint pain in small joints of hands and feet:** Pain is described as achy with sharp pain upon movement, particularly in the knuckles and big toe joints. Symmetrical involvement noted.
- **Morning stiffness:** Stiffness lasts more than 30 minutes, particularly after periods of inactivity.
- **Swelling and redness in joints:** Swelling and warmth noted in affected joints, particularly in the hands and feet.
- **Difficulty making a fist:** Patient reports inability to fully close fingers due to pain.
- **Occasional feverish feelings:** Patient experiences intermittent warmth but has not checked temperature.
- **Weight loss and decreased appetite:** Patient reports a few pounds of weight loss and reduced appetite.

Impression / Diagnosis:

Symptoms suggest possible inflammatory arthritis, likely rheumatoid arthritis, given the pattern of joint involvement and associated autoimmune condition (hypothyroidism).

Recommendations:

- Conduct blood tests including CRP, ESR, CBC, rheumatoid factor, and anti-nuclear antibody to assess inflammation and rule out other conditions.
- Obtain X-rays of hands and feet to evaluate joint damage.
- Referral to a rheumatologist for further management if rheumatoid arthritis is confirmed.
