

MEDICAL REPORT

Report ID: Recording 3

Date: 2025-11-03T11:53:38.904330

Patient Name:	N/A	Referring Dr.:	N/A
Age:	N/A	Modality:	N/A
Sex:	N/A	Exam:	N/A
DOB:	N/A	Source File:	Recording 3.m4a

CLINICAL HISTORY:

The patient reports experiencing pain in the left knee for over a year. The pain is aggravated by cold weather and is described as consistent. There are no other joint problems or swelling reported. The patient has a family history of lymphatic disease affecting knee function and is currently taking Levothyroxine 100 mcg daily.

FINDINGS:

1. Persistent pain in the left knee

The patient feels that the pain started suddenly and has been constant. It worsens in cold conditions and alleviates with warmth.

2. No swelling or other joint issues

The patient denies any joint swelling or issues in other joints.

3. Morning stiffness reported in cold weather

Morning stiffness lasts less than ten minutes when the weather is cold.

4. No history of rheumatologic issues

No prior joint issues or back pain reported, and no family history of rheumatoid arthritis.

IMPRESSION / DIAGNOSIS:

The patient presents with chronic pain in the left knee with no accompanying swelling or other joint involvement.

RECOMMENDATIONS:

- Consider further evaluation of knee pain through imaging studies (e.g., X-Ray or MRI) to assess for any structural abnormalities.
- Advise the patient to keep the knee warm during cold weather and possibly explore physical therapy for pain management.
- Follow-up appointment to monitor symptoms and response to any conservative treatment initiated.
