

# Medical Report

**Report ID:** consultation\_1762771932449

**Patient Name:** ■■■■ ■■■■■■■■

**Age:** N/A

**Sex:** N/A

**Exam Type:** N/A

**Date:** N/A

## Clinical History

The patient reports neck pain when turning the head to the right or left, persisting for approximately two weeks. The patient has used topical medications.

## Detailed Findings

- Neck pain with head movement — Suggests possible musculoskeletal strain or cervical spine issue.

## Impression Summary

The patient presents with neck pain associated with head movement, likely due to musculoskeletal strain.

## Recommendations

- Consider further imaging if symptoms persist.
- Advise on neck exercises and posture correction.

**Urgency Level:** low
